From "AllStarLink Wiki"

Welcome to the AllStarLink WiKi. AllStarLink is a world wide network of Amateur Radio repeaters, remote base stations and hot spots accessible to each other via the Internet and/or private IP networks. AllStarLink runs on a dedicated Linux computer (including the Raspberry Pi) that you host at your home, radio site or computer center. It is based on the open source Asterisk PBX. The app_rpt module it makes a powerful radio/repeater controller. AllStarLink is open source GPL software free for anyone to use.

Recently we've moved some things off of this front page. If you don't see what you are looking for look at the How To's or use search located on the top of every page. We have completed moving the content from the docs site docs.allstarlink.org.

Organization

- The Organization - AllStarLink Inc. - Who is AllStarLink?
- The Beginning - AllStarLink Inc - How AllStarLink came to be.

AllStarLink Menu

- Features - List of the many AllStarLink Features
- Beginners Guide - Step by step instructions to create your account and AllStarLink node.
- ASL FAQ - Questions and answers about the AllStarLink software distribution.
- How To's - A collection of AllStarLink how to's.
- Node Configuration - Detailed configuration settings.
- Development - Information regarding development of the AllStarLink software (i.e., contributing, etc).
- Radio Connections - Instructions to Connect Radios, Repeater and Other Devices to AllStar.
- Troubleshooting - Troubleshooting common problems, things to try, and hints to solve the problem.

Downloads

- ASL AMD Latest AllStarLink installer for x86/AMD (main site)
- ASL AMD Latest AllStarLink installer for x86/AMD (alternative site)
- Pi Latest AllStarLink image for the Raspberry Pi
- ASL Repo AllStarLink Image Repository
- ASL FAQ - Install ASL on your existing Debian box or VM

Note: The ASL 1.01 installer is a Network installer and still uses the dvswitch.org site to download the .deb install files.
