

# Update from SVN

From "AllStarLink Wiki"

As we fix bugs and add additional features, new source code is posted to SVN (and available from the viewvc interface) from time to time. New installs do not get the latest updates as what is in SVN is considered experimental. However, 99.99% of the time you'll want/need the latest. The update procedure is documented on the Allstar site. It is reproduced here for your convenience.

```
cd /usr/src
```

```
rm -rf astsrc
```

```
wget http://x.allstarlink.org/svn-trunk.tar.gz -O- | tar xzv
```

```
mv trunk astsrc
```

```
cd astsrc
```

```
make upgrade-acid
```

This procedure can take over an hour on slow computers or under 10 minutes on fast ones. Restart asterisk when complete.
