

WebTransceiver on MAC

From "AllStarLink Wiki"

The WebTransceiver the AllStar Link PORTAL works fine on the Mac. This howto shows you the setting you need to make to get it working. These instructions are for Mavericks (OS 10.9). In Safari preferences click the Security icon, then Manage Website Settings, then Java, then allstarlink.org. Select Run in Unsafe Mode from the drop down, then click Done and exit preferences. See the attached screenshot.
